SCOPE OF THE COURSE

This unique programme seeks to produce trained personnel who can manage and maintain the technical infrastructure required for media production and transmission. The course objective is to teach working principles and operational aspects of various technical systems employed in content acquisition, production and transmission in Radio and TV broadcasting. The pedagogical method combines theoretical learning with hands-on training in actual work-environment in production houses, broadcasting stations and outdoor locations. The students of the course get employed in TV channels, Radio stations, media production houses, system integrators, educational institutions and others in sectors of the media industry.
